

VMware vCloud Director: Install, Configure, Manage

Course Overview

In this five-day course, you will focus on designing, installing, configuring, and managing VMware vCloud Director® 8.20 for Service Providers. You will learn about self-service provisioning, the creation of organizations, virtual data centers, and catalog services that include predefined virtual machines, and on-demand VMware NSX® networks, as well as the integrated use of VMware vSAN™. This course also covers interfacing vCloud Director with other systems through the use of various APIs.

Course Objectives

By the end of the course, you should be able to meet the following objectives:

- Design a vCloud Director environment
- Deploy vCloud Director
- Manage vCloud Director to satisfy service provider needs
- Configure vSAN and VMware vSphere® storage to enable multiple tiers in provider virtual data centers
- Create and manage vCloud Director organizations and vApps to satisfy business needs
- Create and manage vCloud Director catalogs
- Transfer virtual machine workloads from vSphere into and out of vCloud Director
- Configure networking for organizations and vApps with the help of NSX
- Use NSX to create hybrid cloud connectivity between a public cloud and a private cloud
- Create an interface between vCloud Director and Microsoft Active Directory servers
- Discuss various customer onboarding scenarios with vCloud Director

Target Audience

Cloud architects, systems engineers, data center administrators, and cloud administrators with experience in a service provider or managed services environment

Prerequisites

This course requires completion of the following course:

- [VMware vSphere: Install, Configure, Manage \[V6.5\]](#) or equivalent knowledge

This course recommends completion of the following eLearning courses:

- [VMware vCloud Director: Fundamentals \[V8.x\]](#)
- [VMware Virtual SAN: Fundamentals \[V6.x\]](#)
- [VMware Network Virtualization Fundamentals](#)

Substantial knowledge of TCP/IP networking is helpful.

Certifications

No certifications are tied to this course.

Course Delivery Options

- Classroom
- Live Online
- [Onsite](#)

Product Alignment

- vCloud Director 8.20
- vSAN 6.2 and later
- NSX 6.2 and later

Course Modules

1 Course Introduction

- Introductions and course logistics
- Course objectives

2 Software-Defined Data Center

- Describe the evolution of the software-defined data center
- Describe vSphere
- Describe NSX
- Describe vSAN

3 Cloud Computing and vCloud Director Overview

- Cloud computing overview
- Characteristics of cloud services
- Categories of cloud computing
- VMware offering to enable cloud-based services
- Cloud deployment environments
- VMware vCloud® Air™ network program overview
- Describe vCloud Director in relation to service provider or managed services environments

4 vCloud Director Architecture and Components

- vCloud Director architecture
- Review vCloud Director components and explain their functions
- Examine integration with other VMware products, including VMware vRealize® Business™ for Cloud, VMware vRealize® Operations Manager™, NSX, and vSAN
- vCloud Director terms: vApp and catalog
- vCloud Director terms: organization and virtual data center
- Network concepts
- vCloud Director supported storage

5 vCloud Director API and Metadata

- Describe tools to access the API of vCloud Director
- Use of REST API in VMware vRealize® Orchestrator™
- Describe access to vCloud Director using VMware vSphere® PowerCLI™

- Create and update metadata on objects

6 vCloud Providers

- Identify storage resources for vCloud Director
- Configure and manage storage for providers
- Examine provider space allocation to an organization
- Manage storage requirements for linked clones and shadow virtual machines
- Describe the use cases for vSAN, VMware vSphere® Virtual Volumes™, and legacy storage

7 vCloud Director Organizations

- Create and manage organizations
- Organization virtual data center allocation models
- Recognize resource allocations for an organization
- Create and manage catalogs
- Manage vApps and vApp templates

8 vCloud Networking with NSX

- Describe the basic NSX components in relation to vCloud Director
- Describe the network types available in vCloud Director (external, organization, vApp)
- Discuss the organization and vApp network traffic choices
- Examine the function of network pools
- Explain how to share content between organizations and vApps
- Describe options to connect a private cloud to a public cloud
- Review options for external connectivity with VPN

9 Access Security

- Describe role-based access
- Create custom security roles
- Describe and configure LDAP integration with Active Directory
- Describe single sign-on
- Enable a SAML identity provider
- Describe two-factor authentication

10 Managing Cloud Resources

- Identify how vSphere fulfills vCloud Director requests
- Manage provider and organization virtual data centers

VMWARE WILL NOT BE LIABLE FOR ANY THIRD-PARTY SERVICES OR PRODUCTS IDENTIFIED OR REFERRED TO CUSTOMER. All materials provided in this workshop are copyrighted by VMware ("Workshop Materials"). VMware grants the customer of this workshop a license to use and make reasonable copies of any Workshop Materials strictly for the purpose of facilitating such company's internal understanding, utilization and operation of its licensed VMware product(s). Except as set forth expressly in the sentence above, there is no transfer of any intellectual property rights or any other license granted under the terms of this workshop. If you are located in the United States, the VMware contracting entity for the service will be VMware, Inc., and if outside of the United States, the VMware contracting entity will be VMware International Limited.

11 Managing vSphere Resources

- Manage VMware vCenter Server® instances
- Manage VMware ESXi™ hosts
- Manage vSphere datastores
- Manage stranded items
- Configure and manage resource pools at the vSphere level

12 vCloud Availability for vCloud Director

- Architecture for VMware vCloud® Availability for vCloud Director®
- Prerequisites of vCloud Availability for vCloud Director
- Implementation of vCloud Availability for vCloud Director

13 Customer Onboarding

- Tenant layer 2 VPN access
- Tenant SSL VPN access
- Import existing vCenter Server managed infrastructure into vCloud Director

14 Monitoring vCloud Components

- Monitor usage information at provider and organization virtual data centers
- Analyze vCloud Director logs to mirror vCloud Director cells
- Monitor vCloud Director environments with vRealize Operations Manager and VMware vRealize® Log Insight™

- Leverage vRealize Business for cost management

15 vCloud Director Installation

- vCloud Director setup overview
- vCloud Director hardware and software requirements
- vCloud Director supported platforms
- Network configuration prerequisites
- Install and configure the vCloud Director database
- Configure an Oracle database and a Microsoft SQL Server database
- Create SSL certificates
- Configure VMware NSX® Manager™ for a new vCloud Director installation
- Install and configure an AMQP broker
- Download and install the VMware public key
- vRealize Business integration with vCloud Director

16 vCloud Director Upgrade

- vCloud Director upgrade overview
- Upgrade prerequisites
- NSX requirements
- Additional information
- Best practice for upgrades
